Avoiding ground restoration work and unnecessary costs can determine the business case profitability.

Whether you want to **protect grounds or lawn** against heavy machinery, gardening, pedestrians, cars, etc. most solutions are **expensive, heavy, hazardous or extremely difficult to manage**.

- Plywood and other wooden sheets are **not sustainable after rain and moisture** ...
- Metal and iron plates are extremely **heavy, difficult to store, manage,**

The solution

There is an option & supplement

- **Durable** - doesn't absorb water, flexible and follows the surface well. Withstands even the heaviest excavators. Resistant up to 81 tons
- **Environmentally friendly** - ISO certified 100% recycled polyethylene that is fully recyclable.
- **Easy to manage** - no requirement for multiple employees or cranes to move. System with handheld tow bar and brackets for easy use.
- **Easy inventory management** - rinse, haul in the car and reuse year after year.
- **Cost effective** - Avoid reoccurring investments after each project.

- ... At a lower price than wood *, metal and iron sheet options!
- ... At lower prices than the competition!

(*cost of reoccurring investments included)

Applications
